Frontend: React.js, Next.js, React Router, Tailwind CSS, Bootstrap, Axios, TanStack Query (React Query), Responsive Design, Single-Page Applications (SPA)

Backend: Node.js, Express.js, RESTful APIs, MVC Architecture, JWT Authentication, Middleware, Zod, Multer, Cloudinary

Database: MongoDB, Mongoose

Tools & Technologies: Git, GitHub, Postman, Visual Studio Code, npm, Vite, ESLint

Core Concepts: CRUD Operations, Object-Oriented Programming (OOP), Type Safety, MVC Pattern, Component-Based Architecture

CERTIFICATIONS

Full Stack Development

Completed Full-Stack Development training with practical experience in modern web development.

Full Stack (MERN)

thingQbator (Nasscom Foundation)MERN training via Cisco's thingQbator CSR program.

C Tsunami (C Language Competition)

Participated in coding competitions.

PROJECTS

Electro-Shop 📁

Full-Stack E-Commerce Web Application

Developed **Electro-Shop**, a full-stack e-commerce web application for browsing and purchasing electronic products, with features such as product categories, pricing, stock availability, product details, user authentication, and order management. Implemented secure **JWT-based authentication and role-based authorization** with separate user and admin access, and integrated the **Razorpay payment gateway** for online payments with payment and order status tracking. Built backend REST APIs using **Node.js and Express.js** for managing users, products, orders, and payments, with Axios for API communication and protected routes for secure operations. The application also includes admin-level functionality for managing products and orders, along with persistent data storage for users, products, orders, and payment information.
